

PRESS RELEASE

In an effort to establish a physical presence in “all corners of the globe”, Commercial Forced Air, Inc., of Atlanta, Georgia, a leading company in the design, engineering, and construction of pre-cooling rooms and pressurized ripening rooms for bananas and other fruits and vegetables, announced recently the opening of three new representative offices.

Of these offices, Omega Environmental Technologies (Europe), the London-based contractor has entered into partnership with CFA. Omega is now poised to spearhead efforts on the European market, drawing on CFA’s experience to dominate the industry.

According to Mike Senaydin, the president of CFA, the company now wants to establish a permanent presence in Europe where “the potential for new and repeat business is unlimited.”

Senaydin explains that the CFA & Omega partnership would serve primarily the market for the controlled ripening of imported fruits.

“We have been doing projects all over the globe for years”, explains Senaydin, “and we fully expect to continue to do so in the future”. On the other hand, Omega, with a versatile & multi-lingual workforce, and drawing upon its European-wide contacts would quickly move in to execute contracts of CFA’s design

Omega’s director, Emile al-Kirkhy, notes that, with a permanent base in London, the hub of Europe where unbelievably-cheap airfares originate is key to an agile support mechanism.

CFA’s website, accessed through the Omega website, at www.omegaeurope.com would be an excellent portal for both their strategy & services.
